### **Gravel Bonded Driveways Porous Paving Solution:**

We also offer a Porous paving solution for footpaths, driveways and car parks for the both residential and commercial markets. The voids in the sub base retain water until it can drain naturally back into the water table, preventing flash flooding. We then use an aggregate in a colour of your choice mixed with resin and bond it on to the rubber sub base to prevent cracking and movement. The finished result is a stunning, virtually maintenance free, hard wearing finish Which is also great around tree bases.
